BONUS TOOLKIT

Pantry Labels & Storage Toolkit

The printable companion to *Amish Dry Mix Pantry Cookbook*

What is in here

1. **12 jar labels.** The five lines that make a mix usable: name, date made, how much to use, what to add, and what it makes.
2. **6 lid labels.** For jars you store with the front facing away, or glass jars where you can already see the contents.
3. **6 shelf labels.** One for each group of mixes in the book, so the cupboard tells you where things go.
4. **Master pantry inventory.** One sheet for the inside of the cupboard door.
5. **Rotation log.** For keeping the oldest jar in front.
6. **Shopping checklist.** The dry staples these mixes are built from.

How to print

Plain paper works. Print at **100% scale** or **Actual size**, not *Fit to page*, or the labels will come out slightly small. Black and white is fine: every sheet in this toolkit is designed to stay readable without color.

To attach them: a glue stick on plain paper, or print on full-sheet adhesive paper and cut along the borders. Clear tape over the top of a paper label keeps it legible when the jar gets handled.

> **Write the date before you fill the jar.** It is the one line nobody goes back to add later, and it is the line that tells you how long you have.

JAR LABELS · SHEET 1 OF 2

Cut along the outer lines. Six labels per sheet.

LID LABELS

For the top of the jar. Name and date only, so you can read the shelf from above.

> A lid label is not a replacement for the jar label. It is what you read when the jars are lined up and you are looking down at them.

SHELF LABELS

One for each group of mixes in the book. Tape to the shelf edge.

Seasonings & Savory Bases

All-purpose blends, rubs, broth powders

Soups & Gravies

Cream bases, gravy starters, skillet bases

Baking & Breakfast

Pancakes, muffins, cookies, quick breads

Drink Mixes

Cocoa, chai, coffee, lemonade

Family Batches

Larger jars, for a crowd or a long week

Use Me First

The front row. Oldest jars live here

Master Pantry Inventory

Tape this inside the cupboard door. Update it twice only: when you make a mix, and when a jar runs low. That is enough to know on a Tuesday what you can cook without opening a single lid.

MIX	MADE	AMOUNT LEFT	NOTES

Rotation Log

When you make a second jar of something, the old one goes in front. Write the new one here, and you will never find a fourteen-month-old gravy base behind the cocoa.

MIX	MADE	OPENED	FINISHED / DISCARDED

Before you use any mix: it should smell like what it is, pour loosely, and look even. If it has turned solid, moisture got in. Start over.

Dry Staples Checklist

The shelf these mixes are built from. Tick what you are low on before you shop, not after.

FLOURS, STARCHES & GRAINS	HAVE / NEED
All-purpose flour	
Cornstarch	
Rolled oats	
Cornmeal	

LEAVENING & SEASONING	HAVE / NEED
Baking powder — check the date, it is the first to go	
Baking soda	
Fine salt	
Granulated sugar	
Garlic powder · onion powder	
Dried parsley · basil · oregano · thyme	
Black pepper · paprika · chili powder · cumin	

BASES & POWDERS	HAVE / NEED
Nonfat dry milk powder	
Bouillon or broth powder	
Unsweetened cocoa powder	

> Buy the smallest baking powder tin that suits how much you bake. It is the ingredient that limits how long every rising mix stays good, and a large tin rarely gets used before it weakens.
