THE BIG BOOK OF WHYS FOR KIDS

Our Sources

Where every answer in the book comes from

Every answer in this book started with a real source. We used science museums, universities, government science agencies like NASA, NOAA, and the U.S. Geological Survey, and science magazines written by experts.

Here is how we worked:

- We wrote each answer from at least one source, and we list that source for every question.
- The facts in the “How we know” and “Did you know?” boxes come from the sources too.
- When scientists are still studying a question, we marked it with the “Scientists think…” icon.
- We checked that every picture matches the words.

For grown-ups. The questions are listed in the same order as in the book, section by section, with the page where each one appears. The Try This experiment of each section closes its list.

We checked these sources on November 2 and 3, 2026, and tested every link again on November 9, 2026. When a website had moved or removed a page, we link to a saved copy of the same page from the Internet Archive, marked “(archived).” If a link does not open, search the website for the page title shown here.

SECTION 1

Animals

Why are flamingos pink?

page 6

- Britannica, “Why Are Flamingos Pink?”

Why do zebras have stripes?

page 6
